Instructor to Check and comment below:

- Git/GitHub organization (e.g. organization of branches)
  GH organization file wise looks good. Branches are better used for features instead of per-member
  branches but this is OK.

- Git/GitHub usage: Comments on positing; Number of posting to GitHub; Apr. even distribution of
  submissions among team members (check GitHub post stats for all members)

  Commit messages look good, little to few duplicate messages. Distribution is OK some members
  have a low number of commits.

- Code documented (header, in code) with good coding style

  Little to no comments, no file headers.

- MVC/OO patterns followed up

  Followed.

- Frameworks (back end front end) deployed correctly
  Seems to be deployed correctly.

- Database organization (tables, naming…)
  Table names are OK, usually they are plural, user should be users, but this is a small issue.

- Blobs being used? If so, is it working?

  Image paths are used.

- Adherence to best practices of security (PW encrypted, search inputs verified etc.)

  Passwords seem to be encrypted now. Inputs looks not to be verified,

- Efficiency (proper use of image thumbnails, efficient search eytc.)

  Looks good.
- Other
